ABSTRACT

A multilayered film comprising five layers in which the first, third and fifth layers are made of an ethylene $^{\circ}$ α -olefin copolymer having a density of 0.930 to 0.950 g/cm³ and the second and fourth layers are made of a mixed resin comprising 35 to 55% by weight of polypropylene having a density of 0.900 to 0.930 g/cm³, 40 to 60% by weight of ethylene $^{\circ}$ α -olefin elastomer having a density of 0.860 to 0.900 g/cm³, and 2 to 8% by weight of high-density polyethylene having a density of 0.955 to 0.970 g/cm³; and a container made of the film (bag for infusion fluid, etc.). The multilayered film and the container are useful in medical applications.
